LTM

AYUSH SINGH

Experience Summary

- B.E. in Computer Science & Engineering (AIML) — CGPA: 8.30
- Completed training in Java and Android Development (Java & Kotlin) at LTM
- Hands-on experience building Android applications using Firebase Firestore
- Strong foundation in Machine Learning, Data Structures & Algorithms
- Competitive programmer — 190+ problems solved on LeetCode, CodeChef, HackerRank
- Achieved Gold Badge (5★) in C++ on HackerRank

Skills Summary

Domain	Software Development, Android Development, Machine Learning
Programming Languages	Java, Kotlin, Python, C, C++
Operating System / ERP Version	Windows 10 , Android
Tools / DB / Packages / Framework / ERP Components	MySQL, MongoDB, Firebase Firestore, Android Studio, Firebase, Scikit-learn, Pandas, NumPy, Matplotlib, Streamlit, TextBlob, Seaborn

Professional Certifications / Trainings

1. LTM Training — Java and Android Development (Java & Kotlin)

2. Google Speech Recognition API integration

3. Workshop by BESTOL — 'How to Be Industry Ready'

4. 24-Hour Gamethon Challenge — Teamwork & Problem Solving

Work Experience

Project 1

Project Name	Trainee Performance Tracker (Android App)	Team Size	5
Start Date	Jan 2025	End Date	Mar 2025
Project Description	An Android application developed during LTM training to track and manage trainee performance. Features dual login portals one for employees/managers to monitor trainee progress and another for trainees to view their own results and performance metrics.		
Role & Contribution	1. Served as Team Lead for a 5-member Android development team 2. Designed and implemented dual-login system for Employees and Trainees 3. Built admin authentication module for approving new employee registrations 4. Integrated Firebase Firestore for real-time data storage and retrieval 5. Developed trainee performance dashboard with result tracking features		
Technology &Tools	Java, Kotlin, Android Studio, Firebase Firestore, XML		

Project 2

Project Name	Sentiment Analyzer Using AI	Team Size	Personal
Start Date	Dec 2024	End Date	Feb 2025
Project Description	A sentiment analysis tool using Scikit-learn with CountVectorizer for text classification. Supports real-time voice-to-text, CSV and WhatsApp chat analysis with data visualization.		
Role & Contribution	1. Developed ML model using Scikit-learn and CountVectorizer for text classification 2. Integrated Google Speech Recognition API for real-time voice-to-text analysis 3. Built interactive Streamlit web interface for text, CSV and WhatsApp chat sentiment 4. Implemented data visualization with bar charts and export functionality		
Technology &Tools	Python, Scikit-learn, TextBlob, Streamlit, Google Speech Recognition		

Project 3

Project Name	Expense Tracker Using Machine Learning	Team Size	Personal
Start Date	Oct 2024	End Date	Dec 2024
Project Description	An ML-based application to classify and analyze personal expenses using multiple classifiers with time-series trend analysis and rich visualizations.		
Role & Contribution	1. Developed expense classification using Logistic Regression, SVM and Gradient Boosting 2. Preprocessed data using categorical encoding and feature scaling 3. Implemented pie charts, bar charts and box plots for expense categorization 4. Built time-series module to visualize expense trends over time		
Technology & Tools	Python, Scikit-learn, Matplotlib, Seaborn		

Educational Qualification

Education & Credentials	B.E. in Computer Science & Engineering (AIML) R.N.S. Institute of Technology, Bangalore, Karnataka | CGPA: 8.30 | Aug 2021 – May 2025 Senior Secondary — Purvanchal Inter College, Padrauna, UP | Grade: 70% | May 2020
